Information for our customers

BLOFIX – New fully automatic machine to glue calendar blocks on cardboards

For a couple of years we have the machine MONA to produce and mount date slides onto wall calendars in our production. In discussions with customers we were quite often asked to develop a fully automated machine to glue calendar blocks on cardboard as a completion in the wall calendar finishing.

Now we decided to take such a machine in our product range. The first BLOFIX will be at disposal to show in Küssnacht this July.

A few interesting features of the BLOFIX:

- processing wall calendars with cardboard up to max. 1100 mm
- gluing on up to four calendar blocks with a double-gluing system
- creasing of the cardboard
- punching of fixation tags for each calendar block
- punching of hanger hole with fixation of metal eyelet
- fastening of headboards with stitching

Depending on customer-specific needs it is possible to integrate more operational processes in the machine.

The cycle speed is 2'000 pieces per hour guaranteed, 2'400 pieces at a maximum. Compared with the machines which are on the market today this is a considerable higher output.

The BLOFIX can be fitted in two operating modes:

- Stand-alone: fully automatic with introduction and delivery, from pile to pile
- In-line with the machine MONA: fully automatic line, from pile to pile

We hope we aroused your interest and we are looking forward to welcome you to the presentation of the machine in July in Küssnacht. You will receive a personal invitation at a later time.

Of course we are also glad to inform you in a deeper talk before.
